**GUIDANCE FOR PEOPLE VACCINATED AGAINST COVID-19**

**LAST UPDATED: 3/15/21**

---

**What does it mean to be fully vaccinated against COVID-19?**

People are considered fully vaccinated:

- Two weeks after their second dose in a two-dose series OR
- Two weeks after a single-dose vaccine

If it’s been less than two weeks since your shot, or if you still need to get your second dose, you are NOT fully vaccinated.

**What changes for someone who is fully vaccinated?**

- You can gather indoors with other fully vaccinated people without wearing a mask.
- You can gather indoors with people who are not vaccinated if they’re from one household and they are not at increased risk for severe illness from COVID-19.
- If you come in contact with someone who has COVID-19, you don’t need to quarantine, self-isolate or get tested unless you have symptoms.
  - You should still monitor for COVID-19 symptoms for 14 days following an exposure. If you experience symptoms, you should self-isolate from others, contact your doctor and inform them of your vaccination status.

**What doesn’t change for someone who is fully vaccinated?**

COVID-19 vaccines are effective at preventing COVID-19 disease, especially severe illness and death. Research is being done to determine how well COVID-19 vaccines keep people from spreading the virus and how effective current COVID-19 vaccines are against variants of the virus. Until we gather this information and determine how long COVID-19 vaccination lasts, people who are fully vaccinated will still need to practice protective measures.

- You should still protect yourself and others by wearing a mask, staying at least six feet apart and avoiding crowds and poorly ventilated spaces. Take these precautions in the following situations:
  - In public
  - When gathering with unvaccinated people from more than one household
  - When visiting with an unvaccinated person who is at increased risk of severe illness or death from COVID-19 or who lives with a person at increased risk
- You should still avoid medium or large-sized gatherings.
- You should still delay domestic and international travel.
- You should still monitor for COVID-19 symptoms, especially if you’ve been around someone with COVID-19. If you have symptoms of COVID-19, you should get tested and stay home and away from others.
- **You will still need to follow all state and local guidelines and mandates at your workplace.**

Guidance for Vaccinated Persons

= Vaccinated
= Unvaccinated + low risk
= Unvaccinated + high risk
= Unvaccinated + high risk, not at home

No prevention action

Take preventive action

Wear a mask
Choose well-ventilated areas
Keep 6 ft apart and avoid crowds
Wash your hands

THE POWER TO PROTECT
